

Core

Deadline: Sunday of Week 1

Difficulty Level: Basic

Est. Time: 1 hour

Registration Form

Objectives

- Practice recreating the staple of many websites, a Registration Form
- Practice using `form` , `input` , `select` and `textarea`

Now that we've learned about all of the different types of form tags, let's create a registration form using only HTML. When registering for many websites, whether it's for an email account, a social media platform, or even this bootcamp, you are submitting a form! You will be using lots and lots of forms over the next few months to send data to your back-end so let's get comfortable creating some forms.

Registration Form

First Name: *

Last Name: *

Email Address: *

Password: *

Confirm Password: *

Birthday:

Gender Identity:

☐ Male ☐ Female ☐ Non-binary ☐ I prefer not to answer

A short description about myself:

Favorite Language:

☒ Yes, I would like to receive periodic email updates

* Indicates a required field

Recreate all the **HTML** elements shown on the image above! As you haven't learned yet how to use **CSS** to make the form look nice, don't worry about how our registration form looks for now.

Our **HTML** should contain the following tags:

- `<input type="text">`
- `<input type="password">`
- `<input type="date">`
- `<input type="radio">`
- `<input type="checkbox">`
- `<input type="submit">`

- `<textarea>`
- `<select>`

We'll get to use forms in one way or another in many later assignments during the bootcamp so don't feel the need to memorize all of the different form tags and attributes today. We can always come back to this chapter for reference!

Important: don't worry too much about making the form look identical to the image. We will be learning about how exactly to do that tomorrow. For today, it's good enough that the form has all the inputs it needs.

When you've turned in your solution, navigate over to your "assignment checklist" tab to check out the green check mark - you're one assignment closer to graduation!

Help, I'm Stuck!		
I've struggled for <20 minutes.	I've struggled for <40 minutes.	I've struggled for >40 minutes.
<ul style="list-style-type: none">• Re-read the previous modules for extra clarity.• Search for specific help on Google, such as "making <code><p></code> tags in <i>italics</i>."	<ul style="list-style-type: none">• Post in your cohort's Discord channel so your classmates can help!	<ul style="list-style-type: none">• Tag a TA or instructor on Discord.• Schedule a code review.

☐ Recreate the wireframe above using HTML tags
